

ABDERRAHMAN LARAICH

Full-Stack Engineer

github.com/abdokin
laarichabdo@gmail.com
+212 614 292 371
Casablanca, Morocco

Full-stack developer specializing in Ruby on Rails, React/Next.js, and Symfony with 2 years building healthcare and enterprise software. I work across the entire stack - from low-level C/C++ systems programming to modern web applications. My expertise includes multi-tenant SaaS architectures. Creator of AI-Maktabah platform and contributor to open-source component libraries.

TECHNICAL EXPERTISE

Backend Frameworks:	Ruby on Rails, Symfony (PHP), Node.js/Express
Frontend Stack:	React.js, Next.js, TypeScript, Hotwire/Turbo, Tailwind CSS, daisyUI, ViewComponent
Languages:	Ruby, JavaScript/TypeScript, PHP, Java, C/C++, Rust (learning), SQL, Bash
Databases & Storage:	PostgreSQL, MySQL, Redis, MongoDB, SQLite, Typesense, AWS S3
Cloud & Infrastructure:	AWS S3, Docker, Kamal Deploy, Dokploy, Dokku, Vercel
DevOps & CI/CD:	GitHub Actions, Jenkins, Docker Compose, Git, Linux administration, Nginx
Monitoring & Observability:	Grafana, Prometheus, Sentry, Application Performance Monitoring
Architecture & Patterns:	Multi-tenant SaaS, Microservices, RESTful APIs, GraphQL, Real-time systems, ETL/Data pipelines, CQRS, Hydra APIS
Testing & Quality:	RSpec, Jest, Cypress, PHPUnit, Rubocop, ESLint, TDD, Integration testing, E2E testing

PROFESSIONAL EXPERIENCE

Mibtech

Full-Stack Developer

Casablanca, Morocco
2022 - 2024

- Stack: Ruby on Rails, React, TypeScript, PostgreSQL, MySQL, Redis, Docker, Typesense
- Developed timezone management system and payroll activity tracking with custom rules and configurable approval workflows for Humaneo HRIS platform
 - Implemented customizable export functionality across multiple modules enabling flexible data extraction and reporting
 - Built Typesense-powered search for medical records achieving sub-100ms query times, an 80% improvement over previous implementation
 - Contributed React TypeScript components to @mibtech/ui shared component library published on GitHub Packages
 - Optimized database queries and implemented Redis caching layer reducing API response times by 60% on analytics dashboards serving 1000+ daily users
 - Configured Docker-based deployments with Kamal and Dokku reducing deployment cycles from 30 to 5 minutes using blue-green strategy

TECHNICAL PROJECTS

- Healthcare & Enterprise Systems
- AI-Maktabah Digital Library Platform

Rails, PostgreSQL, Tailwind

 - Initiated open-source multi-tenant platform for Islamic scholars with collaboration from multiple contributors
 - Implemented SEO optimizations including schema.org markup, friendly URLs, and automated sitemaps resulting in 40% organic traffic increase
 - Built admin interface using Avo framework with role-based access control for content moderation and analytics
 - Designed responsive UI with Tailwind CSS 4 and daisyUI ensuring mobile accessibility
 - Integrated podcast streaming with audio transcoding and RSS feed generation for podcast directory distribution

GitHub: github.com/tasfya/almaktabah | Live: [class="link" href="https://3ilm.org">3ilm.org](https://3ilm.org)
- Hospital Information Systems - Consolidation Platform

React, Symfony/PHP, PostgreSQL, Redis

 - Developed anomaly detection system identifying data inconsistencies across distributed hospital databases
 - Co-developed GDR (Gestion de Référence) system for master data management across hospital information systems
 - Built centralized treasury management module enabling unified financial operations across all HIS instances
 - Implemented unified IAM with SSO and granular RBAC for cross-hospital access control
 - Created monitoring dashboard for real-time visibility into data integrity and system health metrics
 - Designed automated backup system with configurable retention policies and point-in-time recovery capabilities

TestSkills - Technical Assessment SaaS Platform

Rails, React, PostgreSQL

- Co-developed full-featured assessment platform with library of role-specific tests covering technical skills, cognitive abilities, and soft skills
- Built assessment builder supporting custom test creation with configurable question types, time limits, and scoring algorithms
- Implemented advanced anti-cheating system including webcam monitoring, tab-switching detection, screenshot blocking, and activity logging
- Developed real-time candidate invitation system with automated email notifications and progress tracking dashboards
- Created comprehensive analytics engine generating instant candidate reports with percentile rankings, skill gap analysis, and comparative scoring
- Integrated job posting pipeline with candidate management workflow from application through assessment to hiring decision
- Built team collaboration features supporting up to 5 members with role-based permissions and shared assessment libraries
- Implemented Stripe subscription management with tiered pricing (Pro and Enterprise plans) and 14-day free trial system
- Added Google Calendar integration for automated interview scheduling based on assessment results
- Developed white-label branding capabilities and API access for enterprise clients with custom reporting requirements

PERSONAL PROJECTS

Automata Visualization Engine

Java, Graphviz

- Built educational tool converting regular expressions to NFAs using Thompson's construction algorithm
- Implemented subset construction algorithm for NFA-to-DFA conversion with state minimization
- Generated visual state diagrams using Graphviz for educational visualization

GitHub: github.com/abdokin/automate-visualization

Secure Password Manager

Next.js, TypeScript, SQLite

- Developed password vault with AES-256 encryption and zero-knowledge architecture
- Implemented local-first architecture using Next.js 14, Drizzle ORM, and SQLite for client-side storage
- Added password strength validation, breach detection via HaveIBeenPwned API, and auto-fill capabilities

GitHub: github.com/abdokin/password-manager

Minesweeper Game Engine

C, Raylib

- Implemented classic Minesweeper using raylib graphics library in C
- Applied flood-fill algorithm for tile revelation with manual memory management

GitHub: github.com/abdokin/minesweeper

EDUCATION

University Hassan II Casablanca

Casablanca, Morocco

Bachelor of Science in Computer Science - Decision Systems

2020 - 2024

Core: Data Structures & Algorithms, Database Systems, Software Engineering, Formal Languages & Automata Theory, Operating Systems, Computer Architecture, Statistics & Probability, Web Development

ADDITIONAL INFORMATION

Languages

Arabic: Native

English: Professional working proficiency

French: Conversational / Intermediate

Interests

Systems programming, Compiler design, Open-source contribution,

Algorithm optimization, Performance tuning, Cloud architecture
